

Learning Goals for Today

Learning Goals for Today

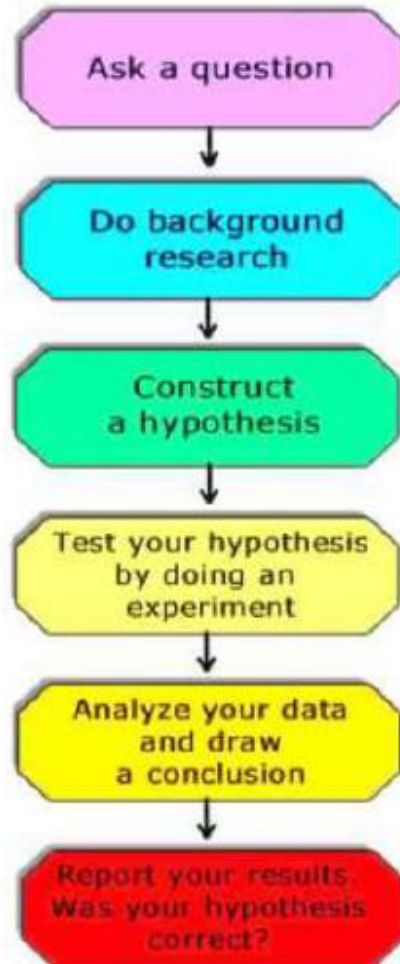

Learning Goals for Today

- Understand the different parts of the “real” scientific method
- Analyze the different thought processes towards a scientific goal

Learning Goals for Today

- Understand the different parts of the “real” scientific method
- Analyze the different thought processes towards a scientific goal

Scientific method

Is this the “real”
scientific method?

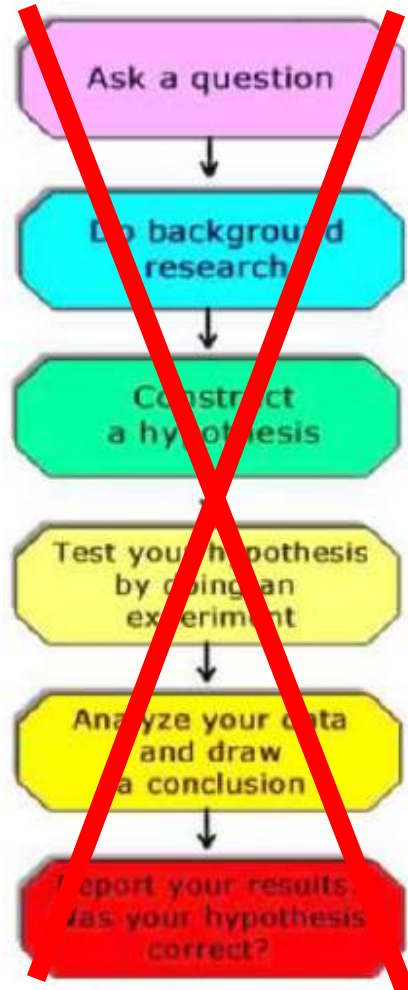

Scientific method

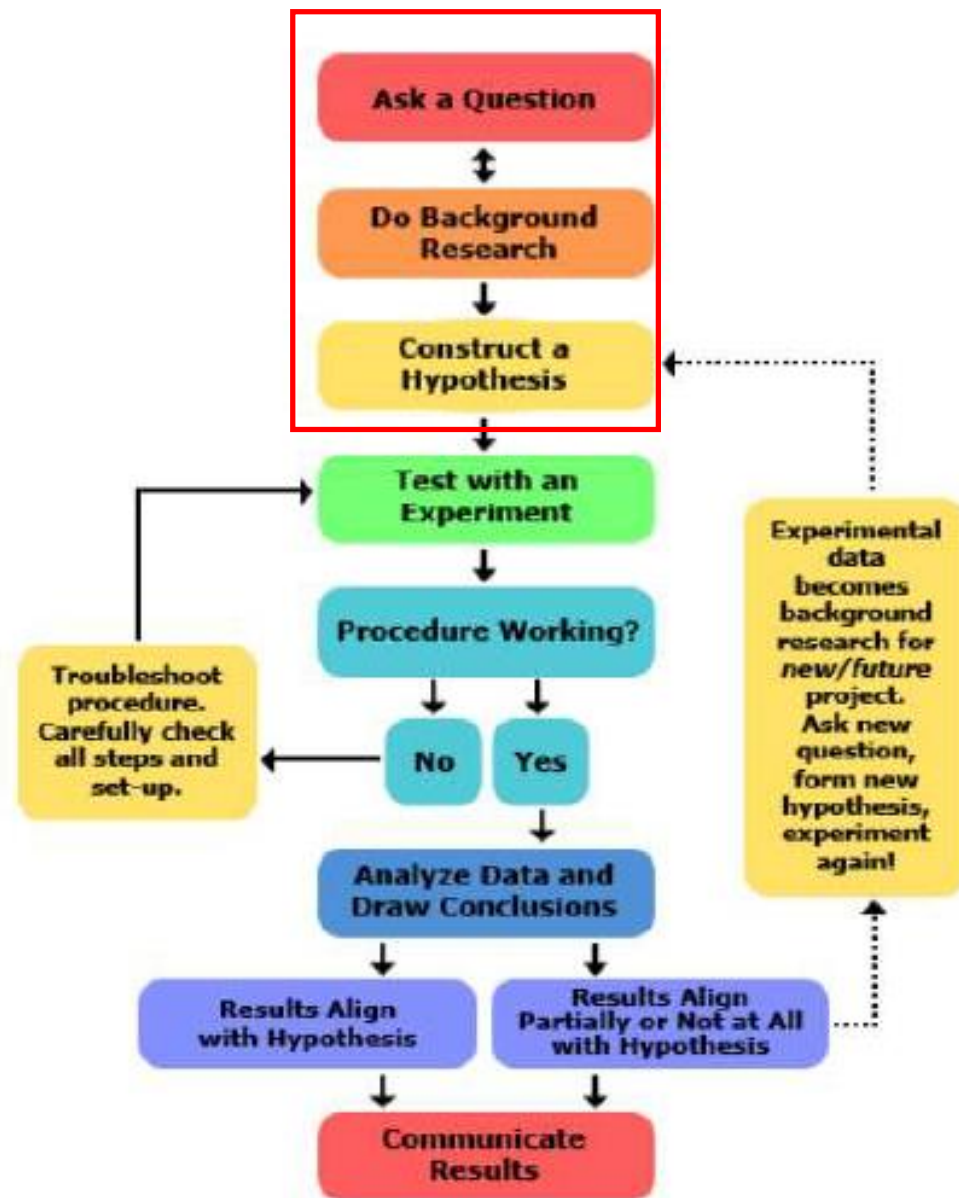

Is this the “real” scientific method?

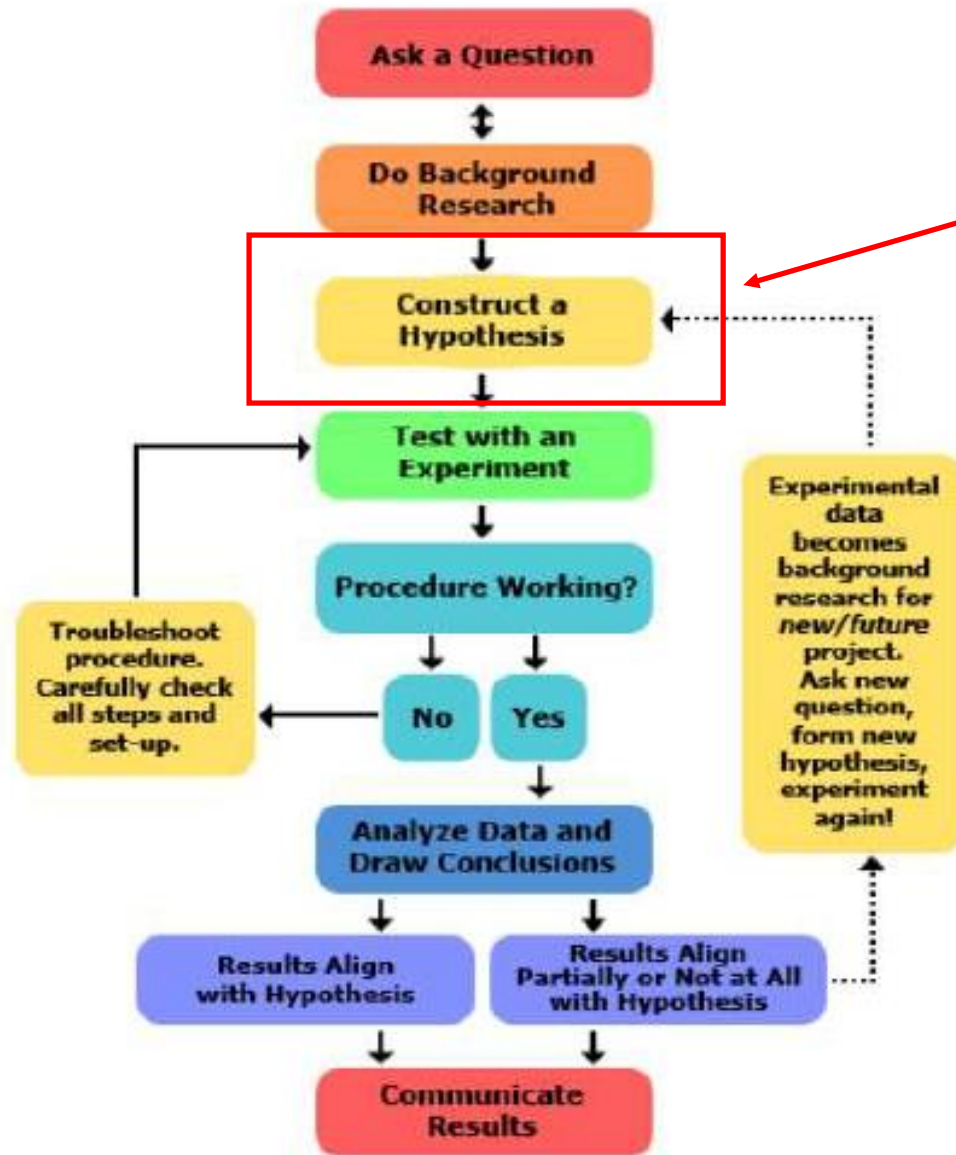

No

Scientific method

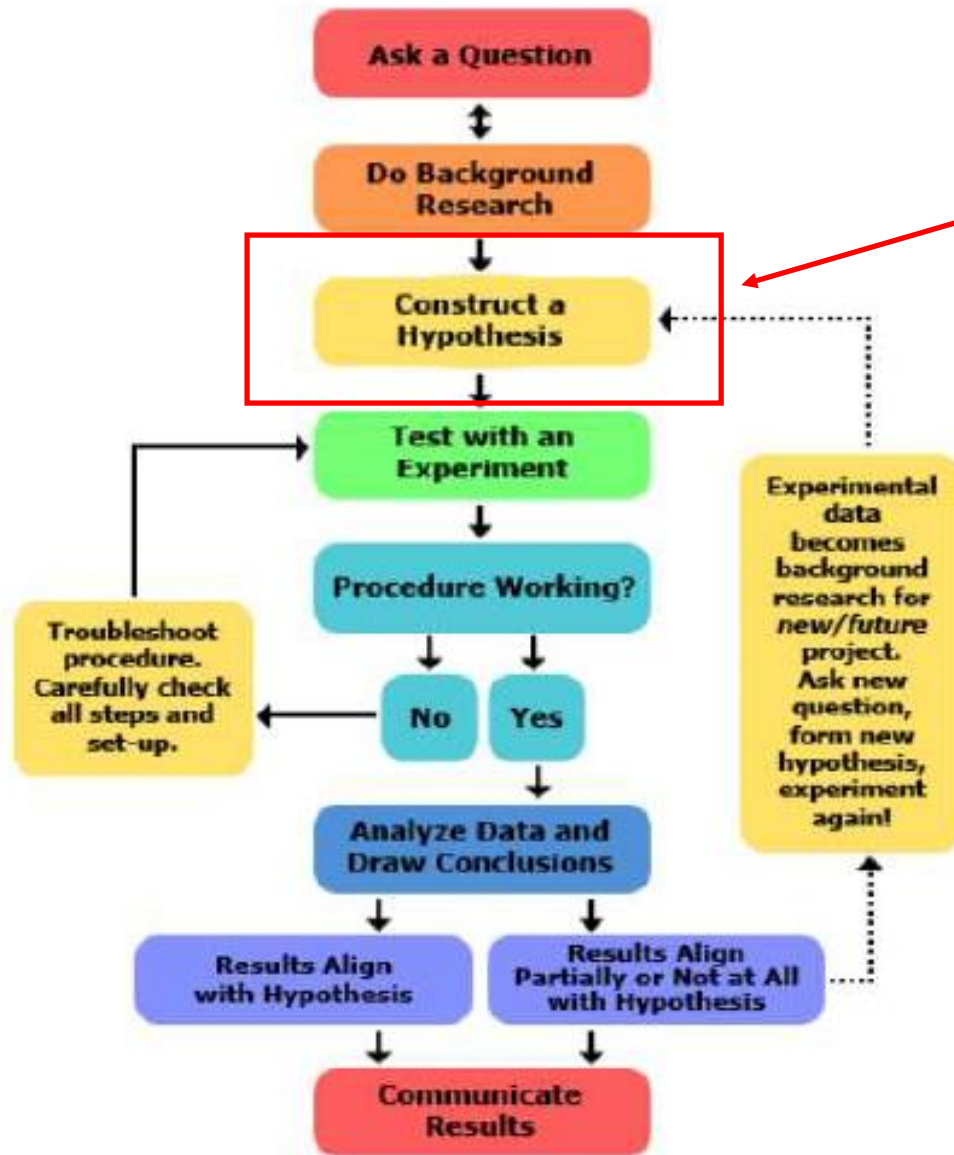

What is a hypothesis?

What is a hypothesis?

“educated guess” to guide a scientific discovery process

What is a hypothesis?

“educated guess” to guide a scientific discovery process

“educated” because we know something (even a “little”) about what we are trying to answer

What is a hypothesis?

“educated guess” to guide a scientific discovery process

“educated” because we know something (even a “little”) about what we are trying to answer

What are two importance characteristics of a hypothesis (your answer must be only two words)

What is a hypothesis?

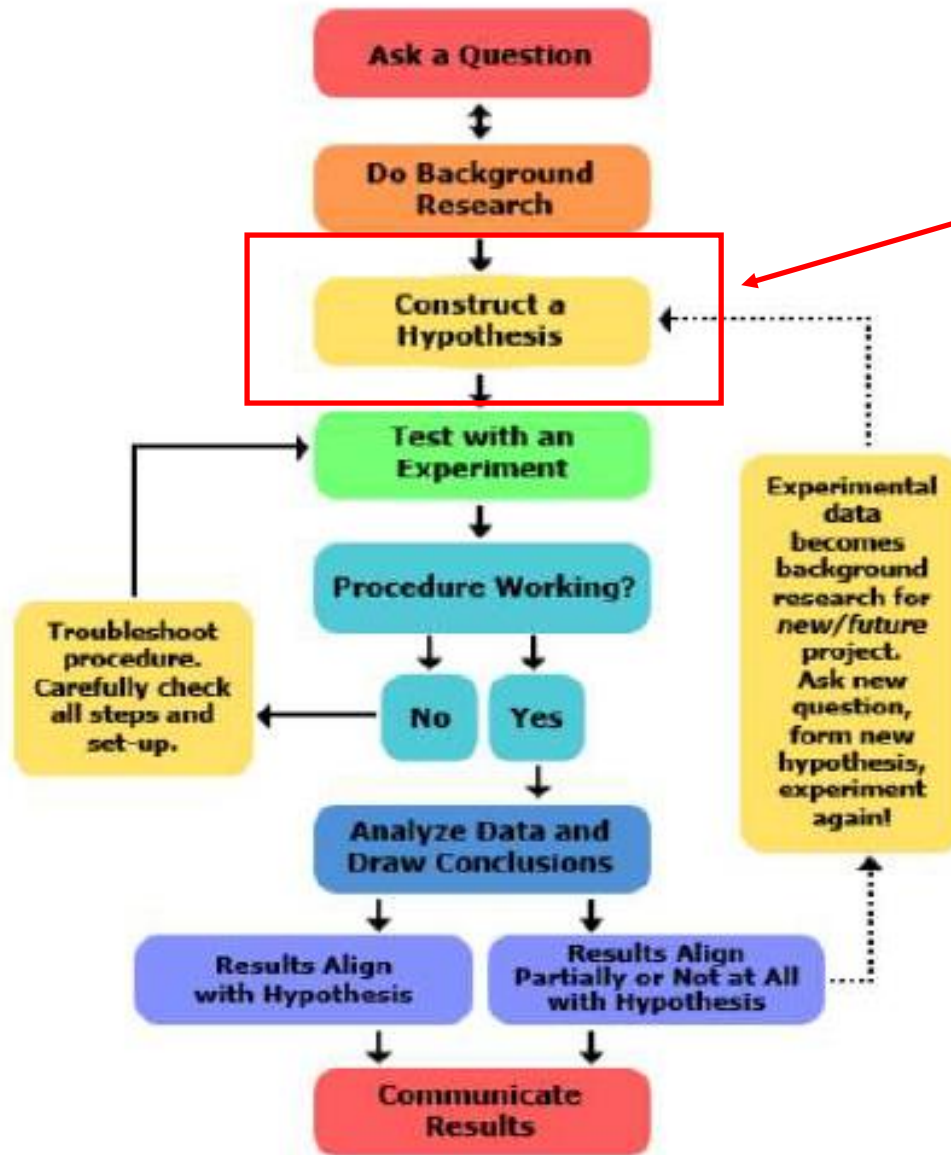

“educated guess” to guide a scientific discovery process

“educated” because we know something (even a “little”) about what we are trying to answer

What are two importance characteristics of a hypothesis (your answer must be only two words)

1) Testable

2) Falsifiable

What is a hypothesis?

“educated guess” to guide a scientific discovery process

“educated” because we know something (even a “little”) about what we are trying to answer

What are two importance characteristics of a hypothesis (your answer must be only two words)

- 1) Testable → be able to be tested with feasible experiments
- 2) Falsifiable

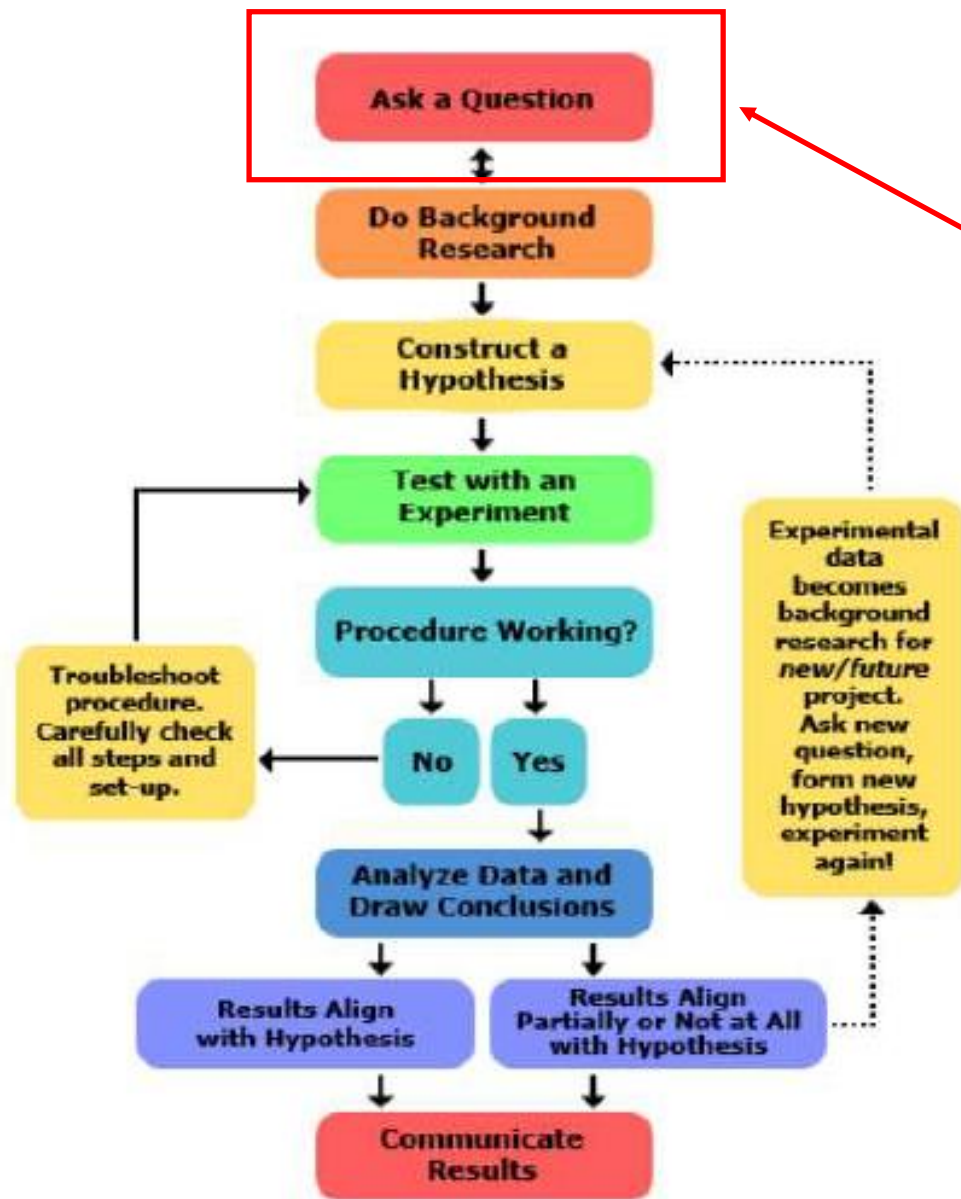

What is a hypothesis?

“educated guess” to guide a scientific discovery process

“educated” because we know something (even a “little”) about what we are trying to answer

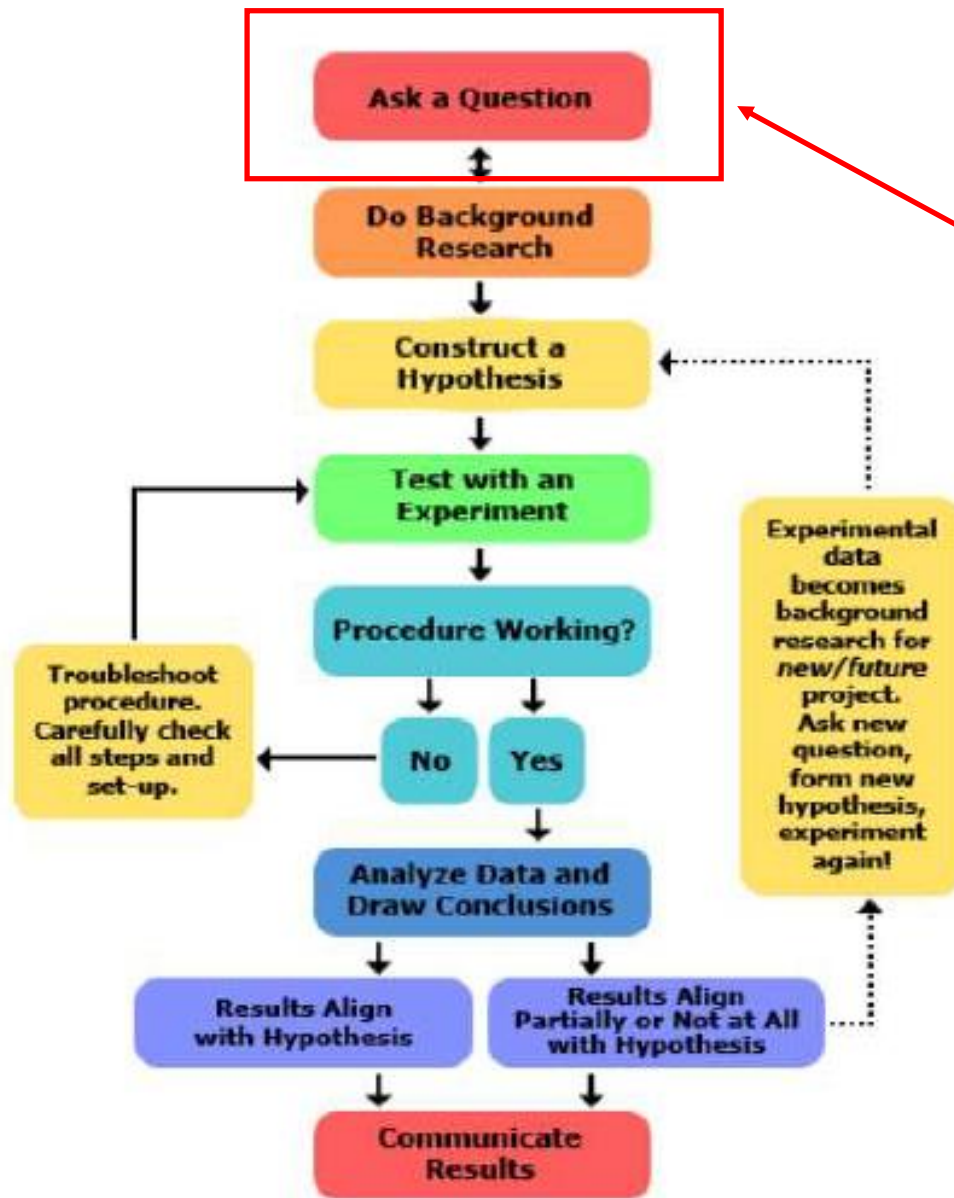

What are two importance characteristics of a hypothesis (your answer must be only two words)

- 1) Testable → be able to be tested with feasible experiments
- 2) Falsifiable → be able to proven “true” or “false”

What is a hypothesis?

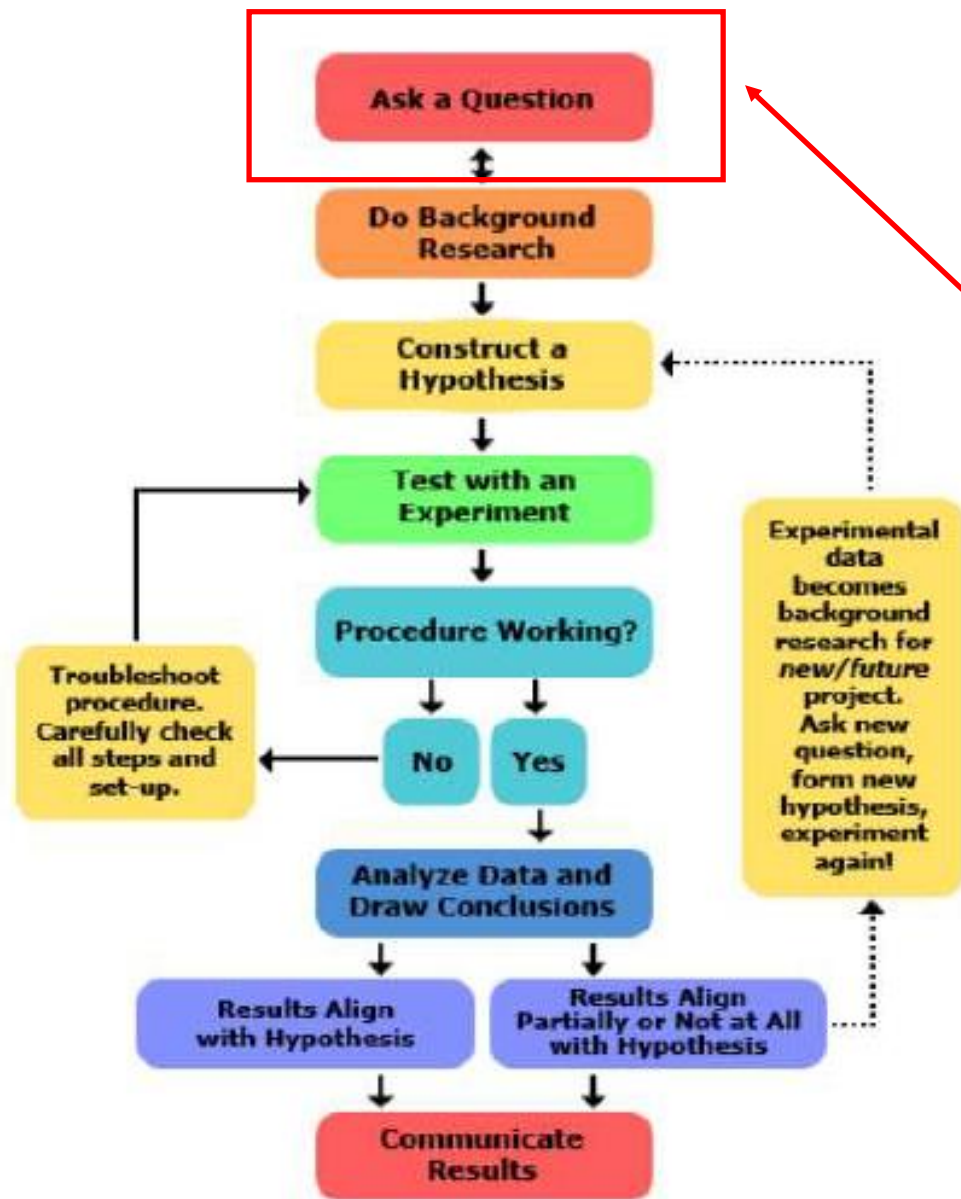

What is a purpose?

What is a hypothesis?

What is a purpose?

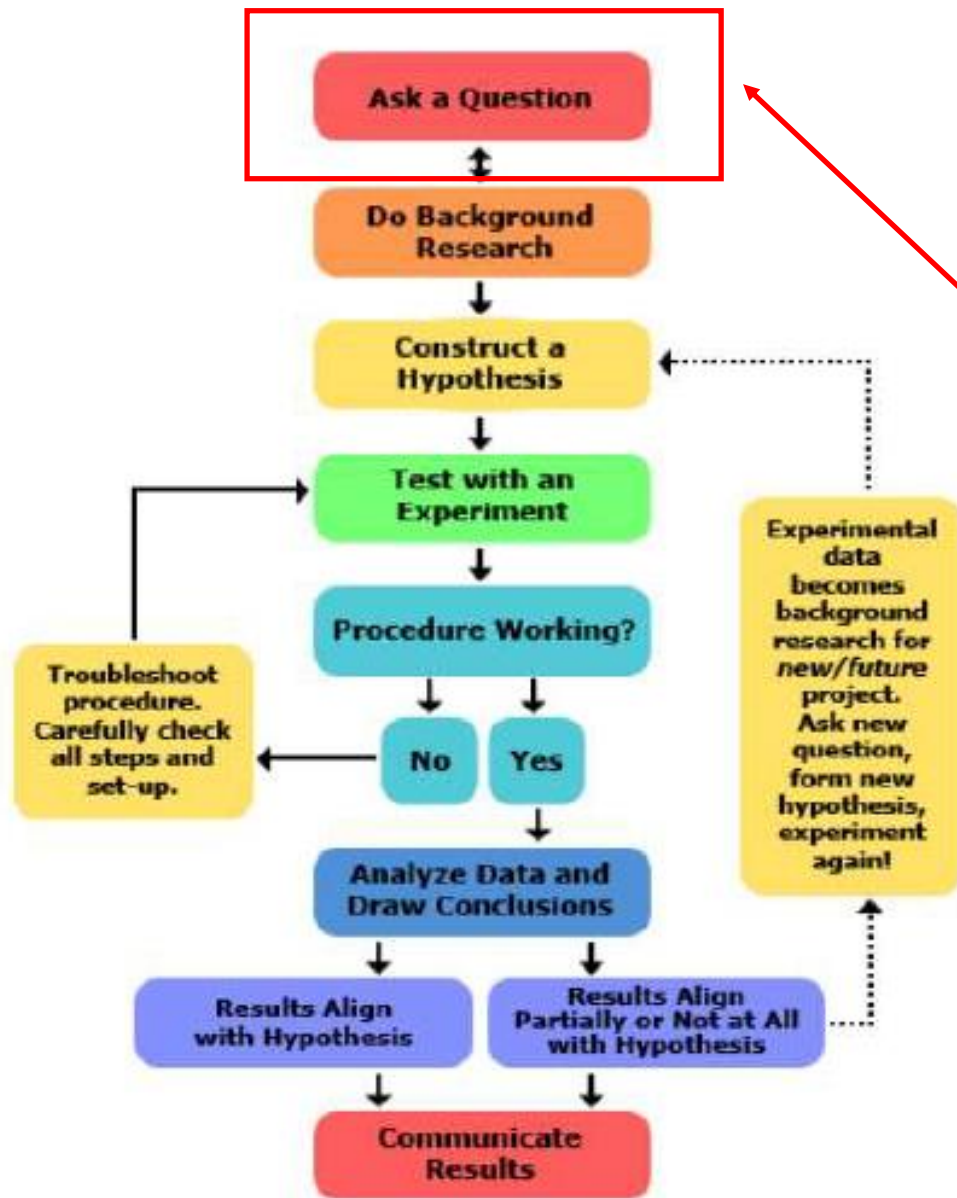

When we are trying to discover something, but we don't know anything about what we are trying to discover

What is a hypothesis?

What is a purpose?

What is a question?

What is a hypothesis?

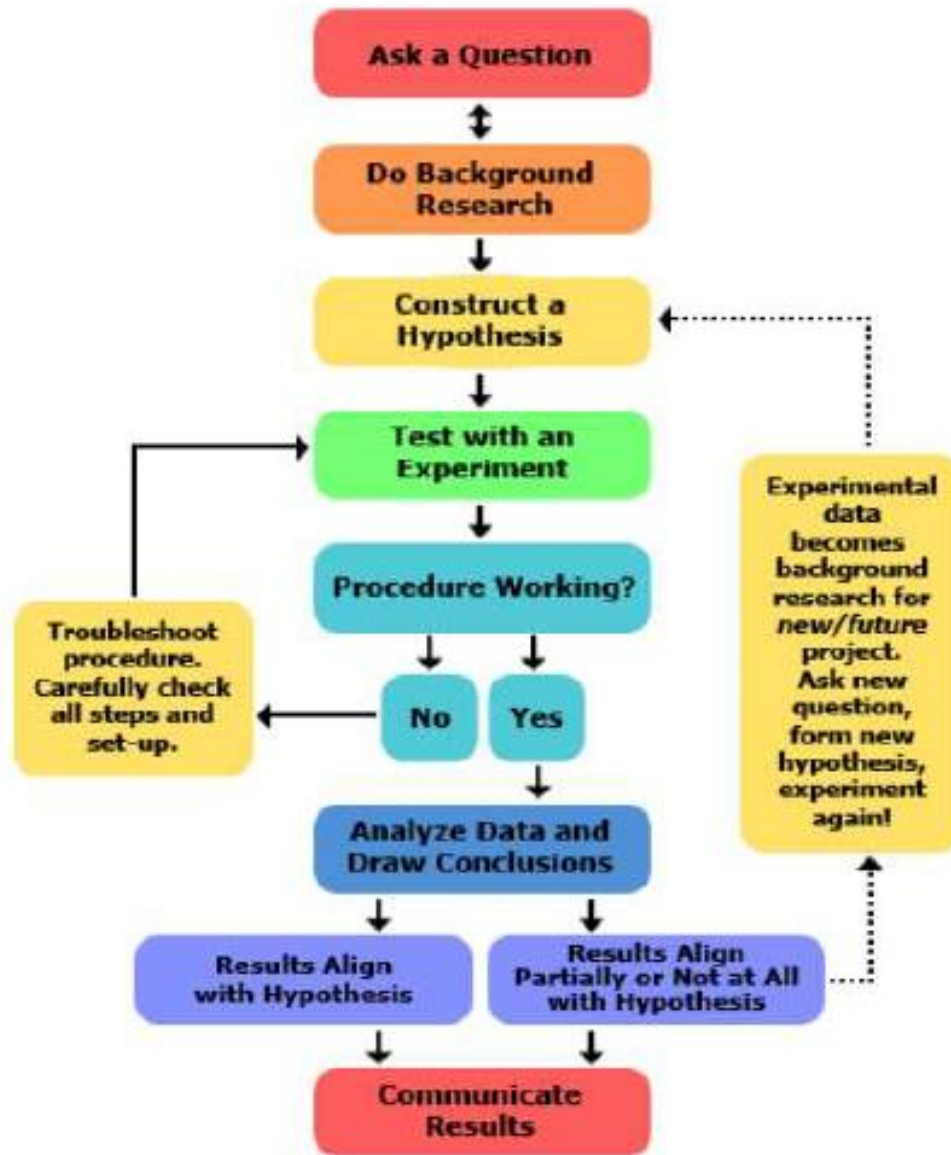

What is a purpose?

What is a question?

Helps us in the start the thought process and to decide if we'll perform scientific discovery through a purpose or hypothesis

What is a characteristic that a purpose, question, and hypothesis must share in the scientific thought process?

What is a characteristic that a purpose, question, and hypothesis must share in the scientific thought process?

Must be as specific as possible.

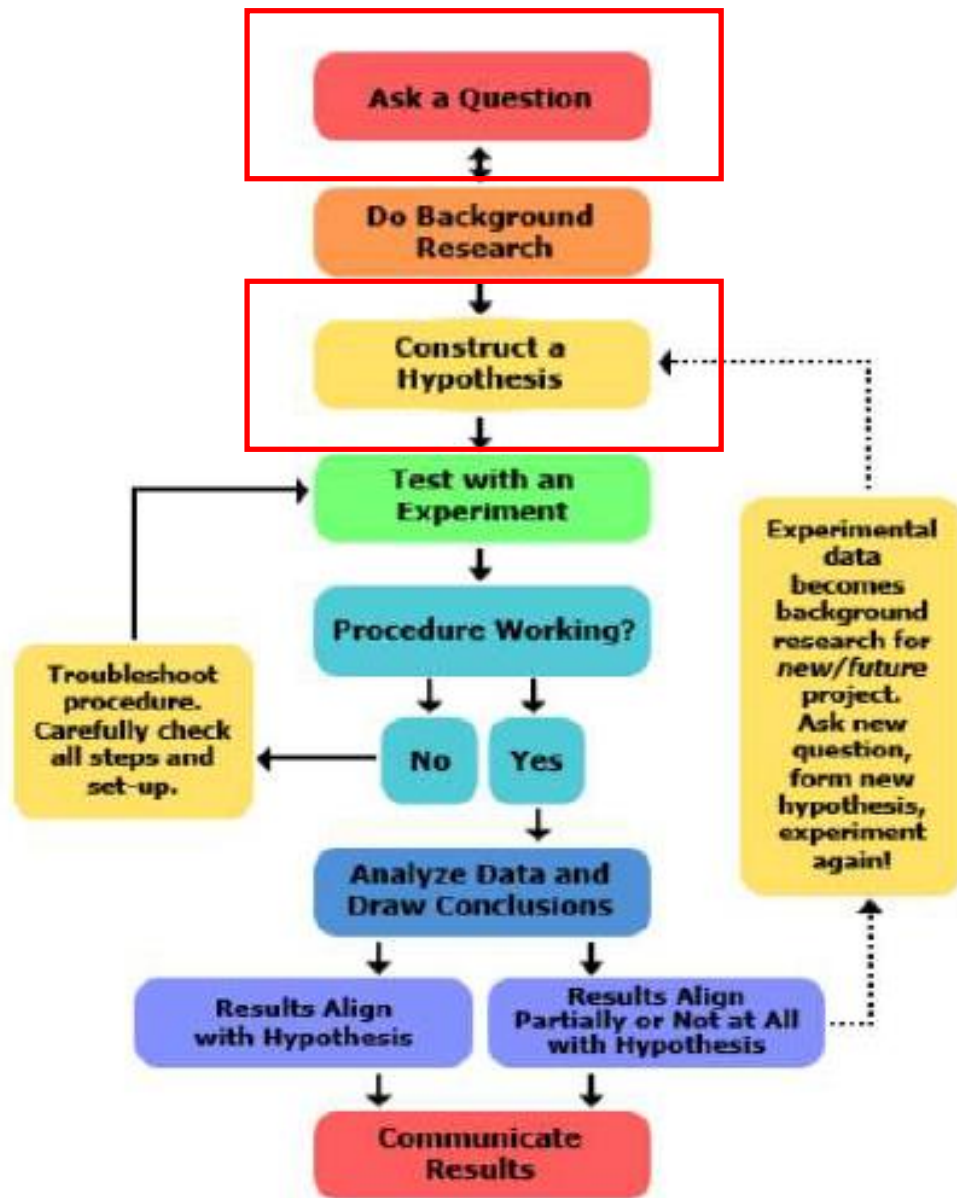

Between a purpose, hypothesis, and question, which one is usually the most difficulty to come up with?

Which is a hypothesis, which is a purpose?

- Determine whether the mountain waves can carry microbes into the stratosphere.
- The concentration of microbes will be 95% less in the stratosphere compared to ground level.

Which is a hypothesis, which is a purpose?

- Determine whether the mountain waves can carry microbes into the stratosphere. **purpose**
- The concentration of microbes will be 95% less in the stratosphere compared to ground level. **Hypothesis**

Design the following:

- a) A **hypothesis** related to today's workshop?
- b) A **purpose** related to today's workshop?
- c) A **question** related to today's workshop?
